

## The Water Cycle Song

Evaporation

Condensation

Precipitation on my mind

This is only the water cycle and it happens all the time.

Condensation

Condensation makes the clouds in the sky

They cool the water vapor as you see them fly by.

Evaporation

Condensation

Precipitation on my mind

This is only the water cycle and it happens all the time.

Evaporation is the heating

of the water in the world

Water changes to a gas

and rises in the air.

Evaporation

Condensation

Precipitation on my mind

This is only the water cycle and it happens all the time.

Precipitation can be rain, sleet, snow or hail

It comes from the sky and falls to the ground.

Evaporation

Condensation

Precipitation on my mind

This is only the water cycle and it happens all the time.
